

**FOR IMMEDIATE RELEASE:**

## Sartorius Service Receives Prestigious ISO/IEC 17025 Accreditation for Field Calibration

Sartorius Service is pleased to announce it has received the ISO/IEC 17025:2005 accreditation for field calibration. ISO/IEC 17025 is an international standard that assesses the technical competency of the participating companies

ISO/IEC 17025 covers every aspect of laboratory management, ranging from sample preparation to analytical testing proficiency to record keeping and reports. The standard focuses on several elements including, but not limited to the laboratories quality system, document control, corrective and preventive action, accommodation and environmental conditions, equipment, measurement uncertainty, evidence of traceability, sampling, and much more.

According to Jerome Varvaro, Director of Service at Sartorius... "Accreditation means member companies have shown that they are capable of producing data that is accurate, traceable, reproducible and cost effective. We are very proud to have met these requirements of this internationally recognized standard of quality"

Other than field calibration, Sartorius also offers traditional service support for all kinds of weighing and mass metrology requirements. Our service capabilities also include our line of Sartocheck filter integrity testers and arium® laboratory water systems. Sartorius is an ISO 9001:2000 registered company.
